

# Loc8 Table System

Thank you for purchasing the ICS Loc8 Table System, we hope it will give you years of useful service. The system is designed only to fit the following right hand drive vans: VW T5 (2004 onwards) and T6 (2015 onwards). Please carefully follow the fitting instructions below. Two videos are available at our website [www.icampersolutions.co.uk](http://www.icampersolutions.co.uk) which show how to fit the Loc8Trim Panel and how to remove and refit the Loc8Table.

## Caution

Before installation it is essential to check that your VW sliding door mechanism is not worn or damaged. If you are unsure of its condition consult a motor vehicle technician before continuing. Innovative Camper Solutions Ltd cannot be held responsible for damage sustained due to the sliding door mechanism being worn or damaged.

## Fitting the Loc8 Door Trim

- 1 With the door closed, remove the grey hardboard panel from sliding door. To do this either use a thin bladed trim clip remover or unscrew the centre of the clips using a 3mm hexagon key. Be careful not to damage the plastic trim clips as you will reuse them.

- 2 Offer up the Loc8Trim trim panel to the door and secure by reusing the grey VW clips. Ensure that each clip is fully engaged through both the Loc8 panel and the door itself before pushing the centre of each clip fully home.

## Fitting the Loc8Table

- 1 With the door closed and holding the table in both hands, lift the top edge of the table into both upper slots

- 2 Push the table into Loc8Trim (A). Pressing the table into the trim, lower it into the slots below (B).

- 3 Always check that the table is fitted correctly with all 4 corners located securely in the Loc8Trim panel (as shown in picture) before sliding the door open.

## Removing the Loc8Table

- 1 Removal of the table is simply the reverse of fitting!
